

EPS

Shipping Container for
Nishikigoi (Ornamental Carp)

Design registration
has been applied for.

B'koi

美^び
鯉^{こい}

EPS stands for Expanded Polystyrene.

The top and bottom of the container
have the same shape, improving
packing efficiency!

Inkjet printable!

Printing of company and
brand names is possible.

- The thermal insulation properties of EPS keep the water temperature in the container stable regardless of ambient temperatures.
- Overseas shipment is possible throughout the year!
- The shape of the B' koi is designed to prevent load shifting when piled up.
- The B' koi is designed based on ergonomics, making cargo handling easier.

Ergonomics is the study of design tools to help people use equipment without undue stress to the greatest possible extent.

A shipping test from Niigata Prefecture (Japan) to Malaysia was performed. It took approximately 27 hours from packing to unpacking. The B' koi made of EPS kept temperatures inside at 10 to 20° C, and succeeded in shipping the test cargo in good condition.

Change in Temperatures during Shipment
from Niigata to Malaysia on April 3, 2017
